

ABSTRACT OF THE DISCLOSURE

5

METHOD AND SYSTEM FOR LOCALIZING JAVA JAR FILES

10 A method, a system, an apparatus, and a computer
program product are presented for facilitating the
customization, translation, or localization of messages,
strings, or other program resources to be used by a
locale-sensitive version of a Java program stored in a
Java JAR file. After opening the JAR file, text strings
within a resource bundle for a first locale can be
determined through a particular process for inspecting the
resource bundle. A resource bundle for a second locale
containing translated versions of the text strings can be
20 created through various means and then stored into the
modified JAR file.
